DETAILED ACTION***Response to Arguments***

Applicant's arguments, filed 5/23/05, with respect to the rejection of claims 1-19 under 35 USC 101 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration and Amendment filed 5/23/05 for co-pending Application 10/708,311, a new ground(s) of rejection is made as follow:

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-19 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 20-38 of copending Application No. 10/708,311. Although the conflicting claims are not identical, they are not patentably distinct from each other because the copending application claims is now claiming a method for implementing delay locked loop including a coarse delay chain in series with a micro-stepped delay chain, a plurality of coarse delay units,

Art Unit: 2816

an input clock signal, a plurality of parallel signal paths (a first of said plurality of parallel signal paths comprising a single coarse delay unit, a second of said plurality of parallel signal paths comprising a pair of coarse delay units, the remainder of said plurality of parallel signal paths) wherein the instant application is claiming an apparatus which includes all of the elements of the copending claims (a coarse delay chain in series with a micro-stepped delay chain, a plurality of coarse delay units, an input clock signal, a plurality of parallel signal paths...)

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

Applicant's amendment of co-pending application 10/311 (canceling identical apparatus claims 1-19 and submitting new method claims 20-38) necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
